Resource

A Resource is what we use for solving problems.

Examples: Money, time,

Resources are usually known to be scarce or limited whereas the problems are unlimited. There is always a need for man to survive and as such he designs a pattern known as scale of preference.

NEEDS / WANTS

Needs are those things man cannot do without.

Wants on the other hand are those things that man can do without.

Scale Of Preference

This is the arrangement of needs and wants according to the level of their importance and making cost.

MICRO ECONOMICS AND METHODOLOGY

Define economics according to 12 economists and the year of their definitions.

DEMAND AND SUPPLY

Demand is the Quantity of a good or service in which a consumer is willing and is able to take off the market at a particular price and at a particular time.

Goods: are tangible items that could be seen and touched.

Services: This are things that gives satisfaction but cant be touched.

MARKET

Definition

i) This is a place where a buyer and seller meets inorder to carry out exchange.

ii) A market can also be defined as an arrangement for a buyer and seller to be in close contact inorder to carry out exchange of goods and services.

In Arrangement, the buyer and seller must not necessarily meet but must be in close contact. It can be through phone calls, Online etc
